

LSM Block Lightening Waiver

At LSM, we strive to provide our customers with the finest machining possible. We have been lightening cylinder blocks for many years with excellent results. With the vast variety and options for blocks we machine, there are some inherent issues that we cannot be responsible for. Core shift, casting shift, improper machining by another source, design changes, porosity, and corrosion, are all things we have little, or no control over. Even with these issues, our success rate is extremely high.

With this said, our obligation is to provide you with a durable, usable block. In the event of any issue not foreseen by LSM during lightening, we will repair block using any methods we see fit to meet this criteria. There is no discount for a repaired block, and we will only replace a block if a mistake was made rendering block unusable. This will be done solely at our discretion.

Please sign and date consenting to this waiver.
